# The Pipeline

Our pipeline consists of the below stages

Let's break it down...

1

## Auto Merge Commits

- **Cost Reduction**
- As less time spent on merging issues for new code

2

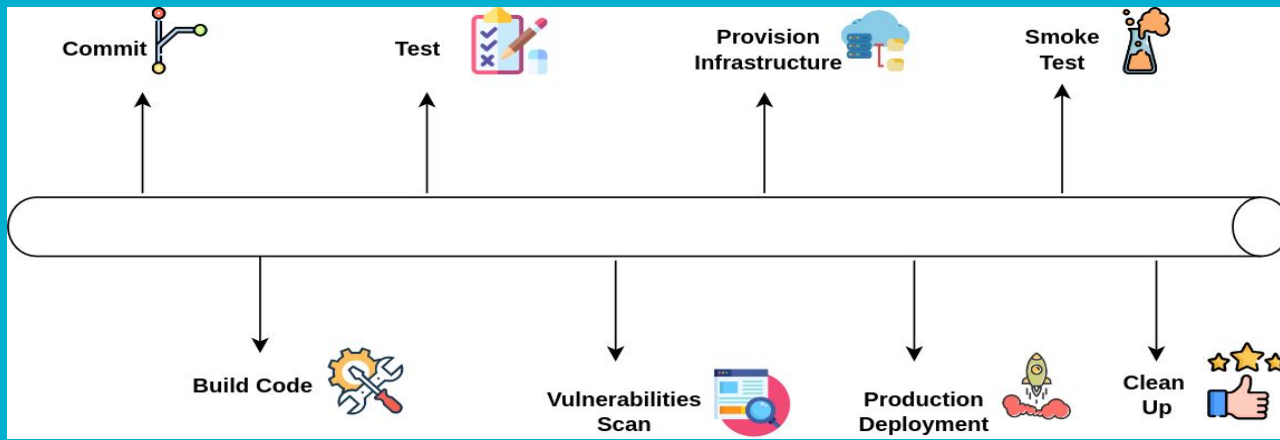

## Build Code

- **Cost Reduction**
- Less time spent of debugging coding issue for new code

3

## Test

- **Avoid Cost**
- Less Bugs introduced to production
- Less time in test

#### 4 | Vulnerabilities Scanning

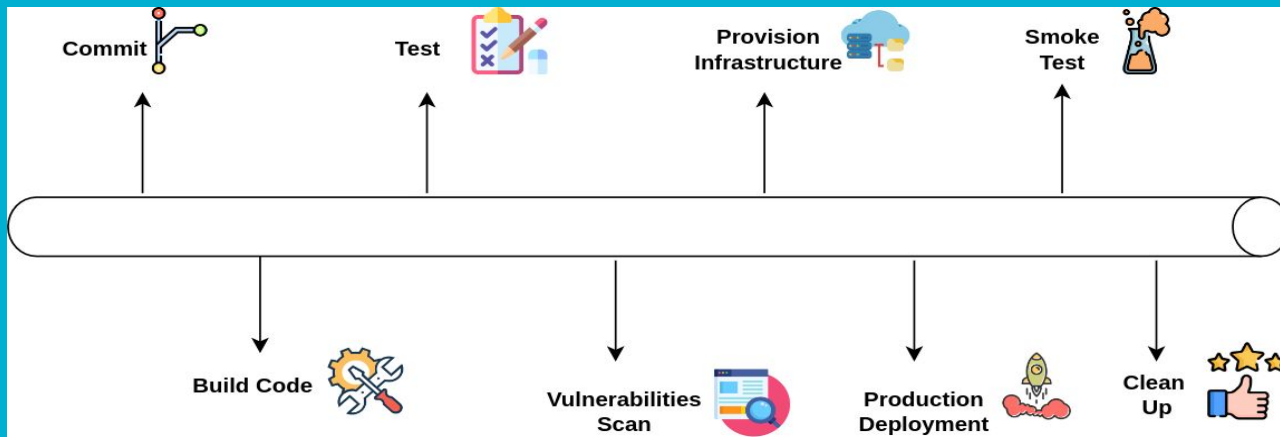

- Avoid Cost
- Prevent Security Holes

#### 5 | Provision Infrastructure

- Avoid Cost
- Less Human Error
- Faster Deployment to production

#### 6 | Production Deployment

- Increase Revenue
- Less Time to market
- Users get new desired features faster

## 7 | Smoke Tests

- **Protect Revenue**
- Reduced downtime from a deployment crash or major bug

## 8 | Clean Up

- **Reduced Costs**
- Less infrastructure costs from unused resources

## 3 other facts I learned from *researching*

---

1. **215 species of bird live here**

Lorem ipsum dolor sit amet, consectetur adipiscing elit

2. **Climate change, fishing, and pollution affect the reef**

Lorem ipsum dolor sit amet, consectetur adipiscing elit

3. **This area occupies 132,973 mi<sup>2</sup>**

Lorem ipsum dolor sit amet, consectetur adipiscing elit

**Thank  
You**
